### **EXPERIMENT**

# Jitle

ANT ON RAIL

#### Description

There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until it gets exhausted. Given an integer array A of size N which consists of integer 1 and -1 only representing ant's moves.

Where 1 means ant moved unit distance towards the right side and -1 means it moved unit distance towards the left . Your task is to find and return the integer value representing how many times the ant reaches back to original starting position.

ECHO29 TEMPBTECH, ECHO29 TEMPB

ECHO 29 TEMPB Tech. ECHO 2

#### Note:

- Assume 1-based indexing
- Assume that the railing extends infinitely on the either sides

#### **Input Format:**

**input1**: An integer value N representing the number of moves made by the ant.

TEMP Brech. ECE029 TEMP Brech. E

ECFO 29 TEMP BT ech. ECFO 29 TEMP BT ech.

**input2**: An integer array A consisting of the ant's moves towards either side

#### Sample Input

1 -1 1 -1 1

#### **Sample Output**
